

Foldr transforms your school's network into a secure, collaborative private cloud experience.

Your Actual Learning Environment

Simple to install and easy to use, Foldr is the hub through which students and teachers can access, create and share documents. Foldr connects your ChromeBooks, iPads, smartphones to the school network and more creating your Actual Learning Environment.

Why you'll love Foldr

All your files in one place.

Are you experimenting with different online file storage services? Are you keeping some work on the school server and some in the cloud? Foldr removes the frustration of keeping track of where files are located.

Foldr presents all your work in a single place. A unified view of the school server, Google Drive and OneDrive.

Now you can focus on teaching, inspiring and collaborating with your students rather than juggling all of your files.

Inclusive learning.

Your students have access to a wide range of devices whether they be school owned or personal/BYOD. Sharing resources with your students can therefore present a challenge.

With apps for iOS, Android and web, Foldr provides universal access regardless of the device. It's available on and off campus, so you can work anytime, anywhere.

"After using a poor @SharePoint plugin to access files outside of school for so long, @FoldrHQ still blows my mind!"

Sheffield High School for Girls

Going 'Paperless'? How's that working out?

Are you attempting to connect multiple apps, learning management systems and cloud storage together? What if you could set, collect and mark student assignments using the systems your school has already invested in?

With Foldr you can share existing learning resources (that PowerPoint from 2010!) and assignments with your students in just a few taps.

Foldr organises returned assignments by class and a student's work is kept private between them and the teacher at all times.

Feedback as engaging as your lessons.

Provide detailed and personalised feedback to your students. Write, draw and comment straight onto their work.

Go further and use stickers and voice notes to explain concepts and give detailed feedback. Your students and their parents will love the personal touch!

Top features

A modern way of working.

Teachers and students can access their documents any time, anywhere and from any device. No more clunky VPN connections or fiddly remote desktop systems.

Paperless assignments.

Set homework and assignments with just a few taps. When students submit their work, Foldr keeps everything neatly filed by class.

Supercharge G Suite for Education.

Integrate G Suite for Education services with your school network to provide a powerful learning ecosystem that blends the best of on-premise and hosted cloud.

"It's been a great addition to our learning transformation programme and is now essential in terms of the school's use of iPads"

Technical information

Foldr Server integrates with your existing directory and respects your underlying network permissions. It can provision access to home folders, shared drives and cloud storage, for thousands of users, in minutes.

Foldr Server is deployed as a virtual appliance. It can be installed into VMware vSphere, Workstation & Fusion; Microsoft Hyper-V; Citrix XenServer; Parallels and VirtualBox - making it suitable for networks of all sizes.

-  Supports Microsoft Active Directory for user authentication.
-  Auto mount home folders and shared drives based on existing permissions.
-  Present cloud services such as Google Drive and OneDrive alongside on premise storage.
-  Client access from iOS and Android apps and HTML5 web interface.
-  Support for two factor authentication, rate limiting and custom security policies.
-  All file transfers take place over HTTPS/SSL so files remain encrypted in transit.
-  Cluster multiple Foldr servers for improved performance and resilience.
-  Access Foldr off-site using public IP, reverse proxy, port forwarding or VPN.
-  Customise your login screen to brand Foldr for your organisation.
-  Multi-tenant support provides secure, segregated access for multiple organisations.
-  "Personal" and "Shared" modes for Android and iOS users suiting shared or BYOD devices.
-  Extensive logging provides a detailed view of users' activity including access and sharing.
